

EE 552, April 13, 2016

Please take out a sheet of paper and write down your responses to the following:

1. How would co-optimization be used in unbundled environments where trans investment and generation investment are generally done by different organizations?
2. Why is co-optimization better than sequential (GEP and then TEP) optimization?
3. What is an additional comment or question you have related to co-optimization? Consider what is interesting to you, or what you find problematic, or an issue we have not covered that seems important within co-optimization, or some extension that you think might be useful.
