Administrative Stuff

- **HW5 is out**
- **It is due on Monday Oct 1 @ 4pm.**
- **Please write clearly on the first page (in block capital letters) the following three things:**
 - **Your First and Last Name**
 - **Your Student ID Number**
 - **Your Lab Section Letter**
- **Also, please staple all of your pages together.**

Formats for representation of integers

[Figure 3.7 from the textbook]

Negative numbers can be represented in following ways

- Sign and magnitude
- 1's complement
- 2's complement

1's complement (subtract each digit from 1)

Let K be the negative equivalent of an n-bit positive number P.

Then, in 1's complement representation K is obtained by subtracting P from $2^n - 1$, namely

$$K = (2^n - 1) - P$$

This means that K can be obtained by inverting all bits of P.

Find the 1's complement of ...

0 1 0 1

0 0 1 0

0 0 1 1

0 1 1 1

Find the 1's complement of ...

0 0 1 0

1 1 0 1

0 0 1 1

1 1 0 0

0 1 1 1

1 0 0 0

Just flip 1's to 0's and vice versa.

2' s complement

(subtract each digit from 1 and add 1 to the result)

Let K be the negative equivalent of an n-bit positive number P.

Then, in 2' s complement representation K is obtained by subtracting P from 2^n , namely

$$K = 2^n - P$$

Deriving 2's complement

For a positive n-bit number P, let K_1 and K_2 denote its 1's and 2's complements, respectively.

$$K_1 = (2^n - 1) - P$$

$$K_2 = 2^n - P$$

Since $K_2 = K_1 + 1$, it is evident that in a logic circuit the 2's complement can be computed by inverting all bits of P and then adding 1 to the resulting 1's-complement number.

Subtract 8

Take-Home Message

- Subtraction can be performed by simply adding the 2's complement of the second number, regardless of the signs of the two numbers.
- Thus, the same adder circuit can be used to perform both addition and subtraction !!!

Overflow = $c_3 \bar{c}_4 + \bar{c}_3 c_4$

$\underbrace{}_{\text{XOR}}$

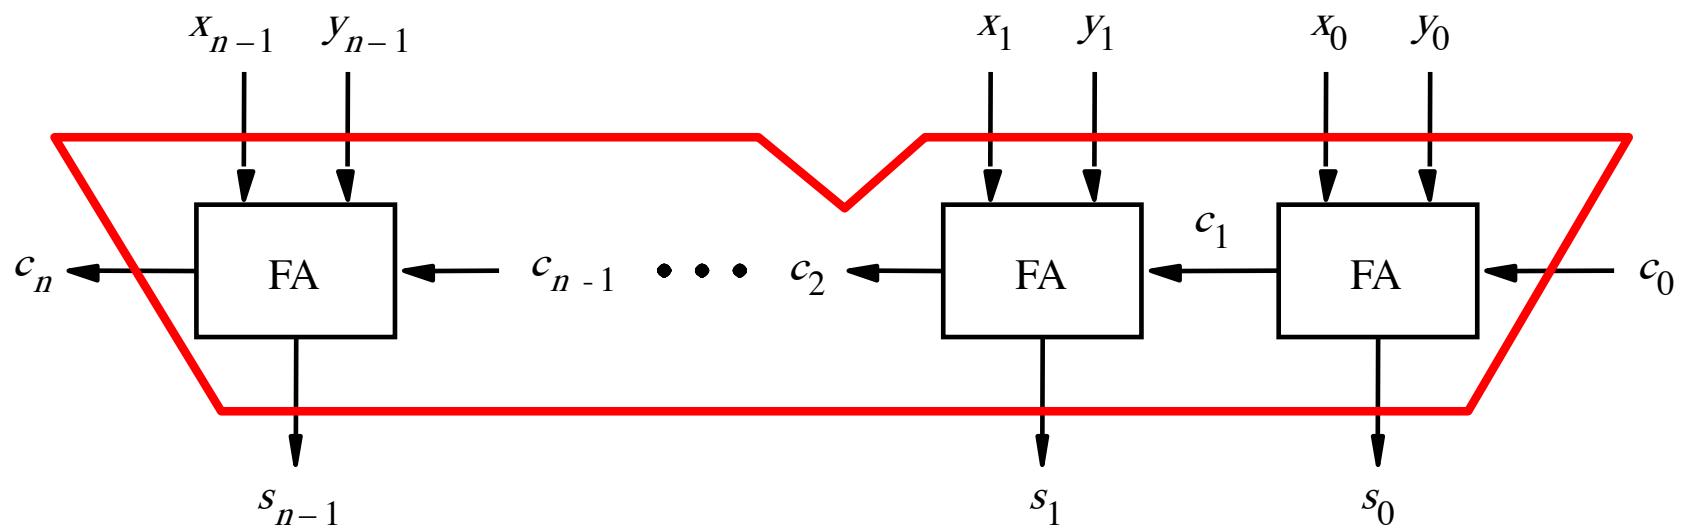

Calculating overflow for 4-bit numbers with only three significant bits

$$\begin{aligned}\text{Overflow} &= c_3 \bar{c}_4 + \bar{c}_3 c_4 \\ &= c_3 \oplus c_4\end{aligned}$$

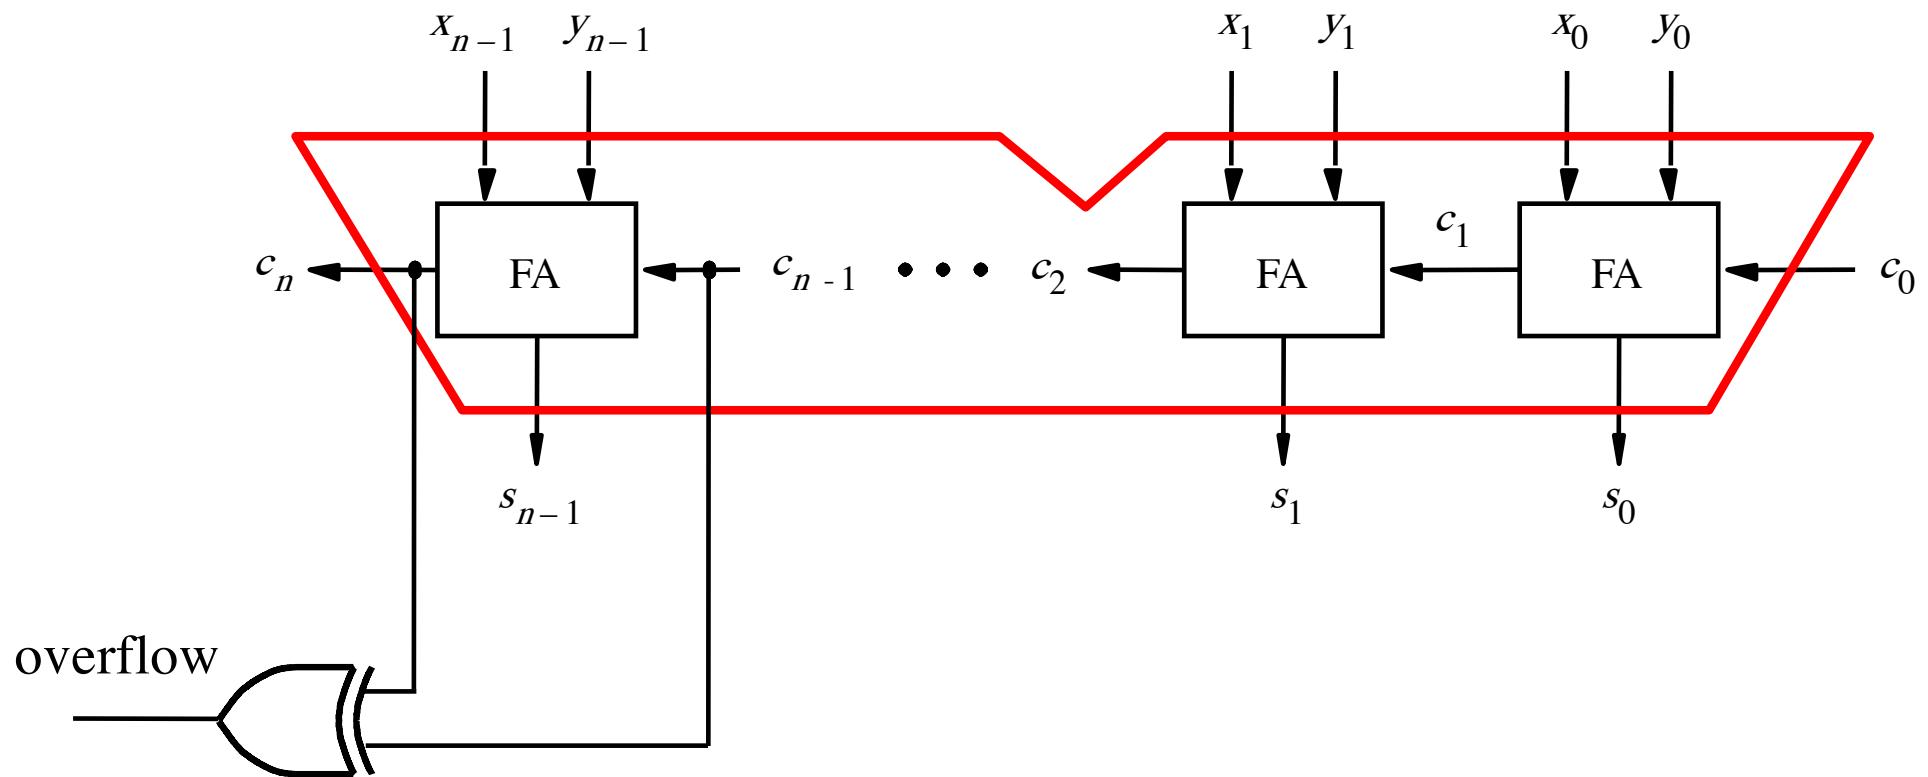

Calculating overflow for n-bit numbers with only n-1 significant bits

$$\text{Overflow} = c_{n-1} \oplus c_n$$
