 - 1. Complete the lab according to the instructions
 - 2. Take screenshots of your ModelSim waveform (note: to receive points your NetID has to be present in the screenshot) and insert them into this document.
 - 3. Include screenshots of any related block design files or Verilog files in the report
 - 4. Complete this report and reupload it to Canvas

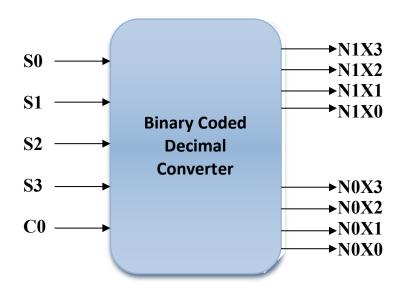

Lab 6 Answer Sheet

PRELAB:

Q1. Add the following numbers then write them in decimal:

Binary numbers to add a3 a2 a1 a0 + b3 b2 b1 b0	Binary result C0 S3 S2 S1 S0	Decimal conversion NO NO (X3 X2 X1 X0) (X3 X2 X1 X0)
1001 + 0111	10000	16
1011 + 1001		
1110 + 0101		
0010 + 1110		
1101 + 1011		

Q2. Consider the five-bit binary result (C0, S3, S2, S1, S0) representation in the table above. We would like to represent each combination as its equivalent in two decimal digits, each of which can be represented in binary as shown in the following table. Finish filling in the following truth table.
