

## Characterization of Municipal Solid Waste (MSW)

### Characterization of Solid Waste by kind, composition, and source.

Two main categories:

- **G** \_\_\_\_\_ : animal and vegetable waste resulting from f \_\_\_\_\_ preparation, originates primarily from k \_\_\_\_\_ and r \_\_\_\_\_, large part of the putrescible matter in MSW, source of o \_\_\_\_\_
- **R** \_\_\_\_\_ : combustible and non-combustible components of MSW
  - combustible fraction includes p \_\_\_\_\_, r \_\_\_\_\_, cartons, boxes, furniture, tree branches, etc. *T* \_\_\_\_\_ is synonymous with combustible portion of rubbish
  - noncombustibles, includes i \_\_\_\_\_ portion of rubbish: tin cans, metals, glass, etc.

Other categories:

- **A** \_\_\_\_\_
- **S** \_\_\_\_\_ Refuse
- Dead **A** \_\_\_\_\_
- Abandoned v \_\_\_\_\_
- **I** \_\_\_\_\_ Wastes (food processing wastes, lumber and metal scraps, shavings)
- **D** \_\_\_\_\_ Wastes (lumber, pipes, bricks, masonry)
- **C** \_\_\_\_\_ Wastes (lumber, pipe, scraps)
- Special Wastes (includes hazardous substances, explosives, radioactive materials)
- **W** \_\_\_\_\_ Treatment Plant Residues (includes screenings and grit)

### MSW Composition by material:

- p \_\_\_\_\_ and paperboard
- g \_\_\_\_\_
- m \_\_\_\_\_ (steel, aluminum, other nonferrous metals)
- p \_\_\_\_\_
- r \_\_\_\_\_ and leather
- t \_\_\_\_\_
- w \_\_\_\_\_
- other m \_\_\_\_\_

### MSW Characterization by Product Category:

- c \_\_\_\_\_ and packaging
- n \_\_\_\_\_ goods (e.g., newspapers, “selected consumer electronics”)
- d \_\_\_\_\_ goods (e.g., appliances)
- y \_\_\_\_\_ trimmings
- f \_\_\_\_\_ scraps
- other

### Integrated Solid Waste Management

- Priority is on s \_\_\_\_\_ r \_\_\_\_\_
- Progress since 1992:

Source Reduction

| Year | Tons Reduced at Source |
|------|------------------------|
| 1992 | 630,000                |
| 1994 | 7,974,000              |
| 1995 | 21,418,000             |
| 1996 | 23,286,000             |
| 1997 | 32,019,000             |
| 1998 | 40,319,000             |

### Source Reduction By Major Material Category

| Waste Stream           | Tons Reduced |
|------------------------|--------------|
| Durable Goods          | 5,289,000    |
| Nondurable Goods       | 8,956,000    |
| Containers & Packaging | 12,004,000   |
| Other MSW              | 23,793,000   |
| Total for 1999:        | 50,042,000   |

### Second Priority following Source Reduction is Recycling and Reuse.

- \_\_\_\_\_ % recycling rate in 1999 (64 million tons)
- \_\_\_\_\_ curbside recycling programs in 1998
- \_\_\_\_\_ yard trimmings and composting programs in 1997

### Least Favorable MSW Management Activity: Ultimate Disposal (e.g., landfills)

Number of landfills in U.S. continues to decrease from about \_\_\_\_\_ in 1988 to about \_\_\_\_\_ today

### Landfills must:

1. keep out regulated h\_\_\_\_\_ w\_\_\_\_\_;
2. apply a d\_\_\_\_\_ c\_\_\_\_\_;
3. control d\_\_\_\_\_ v\_\_\_\_\_ populations (rodents, flies, mosquitoes, etc.);
4. monitor m\_\_\_\_\_ g\_\_\_\_\_;
5. restrict p\_\_\_\_\_ a\_\_\_\_\_;
6. control s\_\_\_\_\_ w\_\_\_\_\_ run-on and run-off,
7. protect surface water from p\_\_\_\_\_; and
8. keep appropriate r\_\_\_\_\_.

### Design Standards

Landfills must be designed to ensure d\_\_\_\_\_ w\_\_\_\_\_ standards are not exceeded in groundwater. Landfills must be designed with a c\_\_\_\_\_ l\_\_\_\_\_ made of synthetic membrane liner on top of a two-foot c\_\_\_\_\_ l\_\_\_\_\_.

### Ground-water Monitoring and Corrective Action

All landfills must have monitoring w\_\_\_\_\_ to detect any groundwater contamination. If ground-water is contaminated, the owner/operator is required to clean it up to acceptable standards to protect human health and the environment.

### Closure and Post-Closure Care

When a landfill stops accepting waste, it must be capped to keep any liquid away from the buried waste. Once the landfill is closed, the owner/operator is responsible for maintaining the final cover, monitoring groundwater, methane, and continuing l\_\_\_\_\_ management for 30 years.

## Financial Assurance

Landfill owners/operators must show that they have financial mechanisms to cover the costs of closure, post-closure care, and any needed cleanups from releases. Financial mechanisms can include surety bonds, letters of credit, insurance, or guarantees, among others. The majority of landfills are small (less than 20 tons of municipal solid waste per day) and some may qualify for an exemption from the design standards, ground-water monitoring, and corrective action requirements. To qualify for an exemption, a small landfill must not be causing ground-water contamination, and must be located in either a very dry climate or a very remote location.

## Components of a Solid Waste Landfill:

- Liner:
- Leachate:
- LCRS:
- Cell:
- Daily Cover:
- Lift:
- Final Lift:

- Final Cover:

- Cap

- Postclosure:
